

TSL

THE SAFE LEVER

This slim elegant lever's unique design enhances not only the aesthetics of the vehicle but also the overall driving experience for the end user.

For many years our endeavour has been to offer the perfect balance between safety and performance, the **TSL** epitomises this approach, offering the End User a unique experience in effortless electronic acceleration and mechanical braking.

The **TSL** is the best possible floor mounted solution available on today's market, it comes complete with a newly patented and revolutionary design "DSAS" – double spring acceleration system should one of these springs break, DSAS ensures that full acceleration is still possible.

Great attention to detail has been paid designing this solution, the distinctive curve ensures a smooth braking action, at the same time optimising available leg room.

Guidosimplex[®]

TSL THE SAFE LEVER

The **TSL** is the perfect ambassador for “Made in Italy”, an embossed rubber coating embraces the entire structure whilst the ergonomic grip is refinished in hand stitched soft Italian leather.

Operating the device is intuitive and comfortable, placing the palm of your hand on the ergonomic grip, simply push forward to brake, braking is in direct proportion to the force applied.

Acceleration is achieved by activating the electronic Half Moon trigger positioned strategically alongside of the ergonomic grip, the experience is light to the touch and thanks to our in-house IG Interface software acceleration can be programmed to suit individual needs, gradual or rapid... as is the case with all of our electronic solutions, acceleration is automatically inhibited once the brake is activated.

Two versions of **TSL** are now readily available:

1. 3 Button version, which includes Horn, Hill Start Brake and Kickdown
2. Complete with secondary controls: Headlights - Low, High and Flash, Indicators and Hill Start Brake
