

ACCELERATOR AND BRAKE HANDLE

PUSHDIS provides a manual accelerator – brake that replaces the accelerator and brake pedals for drivers with no or limited use of their legs.

The combined acceleration and brake system, as well as a mini keypad (in option), is a simple, practical and safe adaptation. It can be mounted to the left or right of the steering wheel. PUSHDIS is operated with just one hand, which also makes it a very discreet system whether the car is being driven in adapted or conventional mode.

- > I activate PUSHDIS when starting the engine.
- > I pull on the handle to accelerate.
- > I push the handle horizontally to brake.

PUSHDIS

CATEGORY

Combined acceleration and brake system + additional controls

(FRENCH) DRIVER'S LICENCE CODES

32/35

THE PLUSES

- > Ergonomic
- > Discreet
- > Simple
