

THE ZERO GRAVITY
GADGET OF THE FUTURE

100% FUNCTIONALITY

What's an arm support?

The zero gravity gadget of the future.

A dynamic arm support is an assistive technology product which allows people with limited arm and shoulder function, to move their arms and hands freely (again), and therefore make it possible to conduct all kinds of daily activities.

Our arm supports have a unique mechanism that compensates the weight of the users arm. Thereby the arm is weightless. People with limited function can then use the strength they have got left to lift and move their arm again.

Our arm supports do not take over any function. They only support the arm. The user makes the movements himself, using the strength he's got left. This is good for the muscles, joints and cognitive functions of the user. Our products follow all the movements and support the arms in a 3D area.

We have four different arm supports. These arm supports are ascending in functionality. The less strength the user has, the more advanced the arm support should be. Our arm supports can also be used as an eating device.

"We create independence, freedom, self-respect and quality of life."

For Who?

people with limited arm and shoulder function.

A large group of people can benefit from our dynamic arm supports. You only need some strength in your fingers and some flexibility in your joints. We'll defy gravity and do the rest.

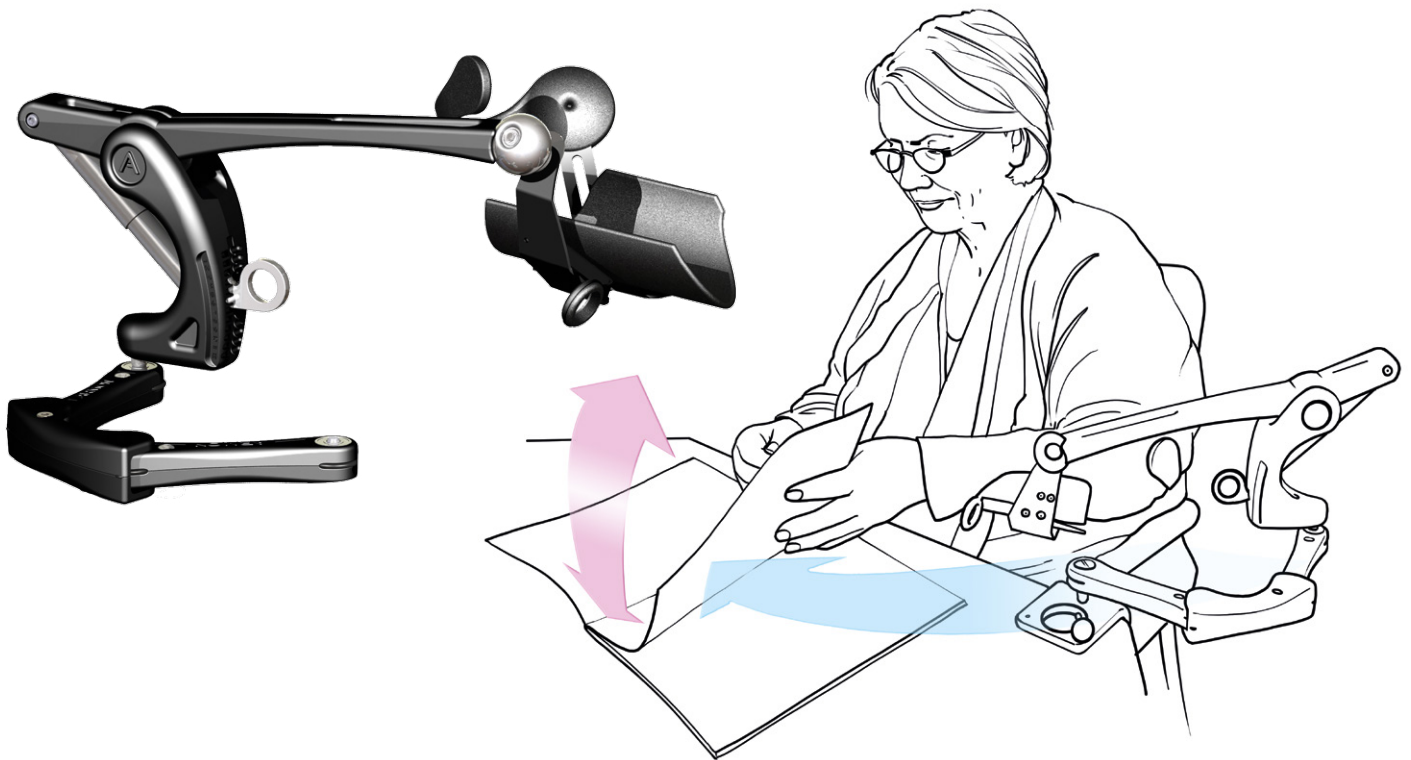

Armon Products dynamic arm supports can be used by people with limited arm and shoulder function. This can be a result of for instance:

- muscle disease
- rheumatism, reumatoid arthritis
- rotator cuff injuries
- postural problems
- after breast surgery
- tetraplegia, quadriplegia, paraplegia
- mastectomy
- RSI / CANS / OOS
- neurological disorder
- repetitive strain injury
- cervical pain
- thoracic and lumbar pain
- brain injury, stroke, CVA, TBI
- spinal cord injury
- SCI

Armon Products dynamic arm supports can be used for:

- Daily personal use. To make people independent again. Eating, drinking, combing their hair, putting on glasses, practising hobbies, working on a computer/tablet, etc etc.
- Training and rehabilitation. To accelerate and shorten the rehabilitation time. To save on staff working hours.

ARMON EDERO®

Possible to mount on

Electric wheelchair

Manual wheelchair

Office chair

Desk / Table

Work chair

Floor base

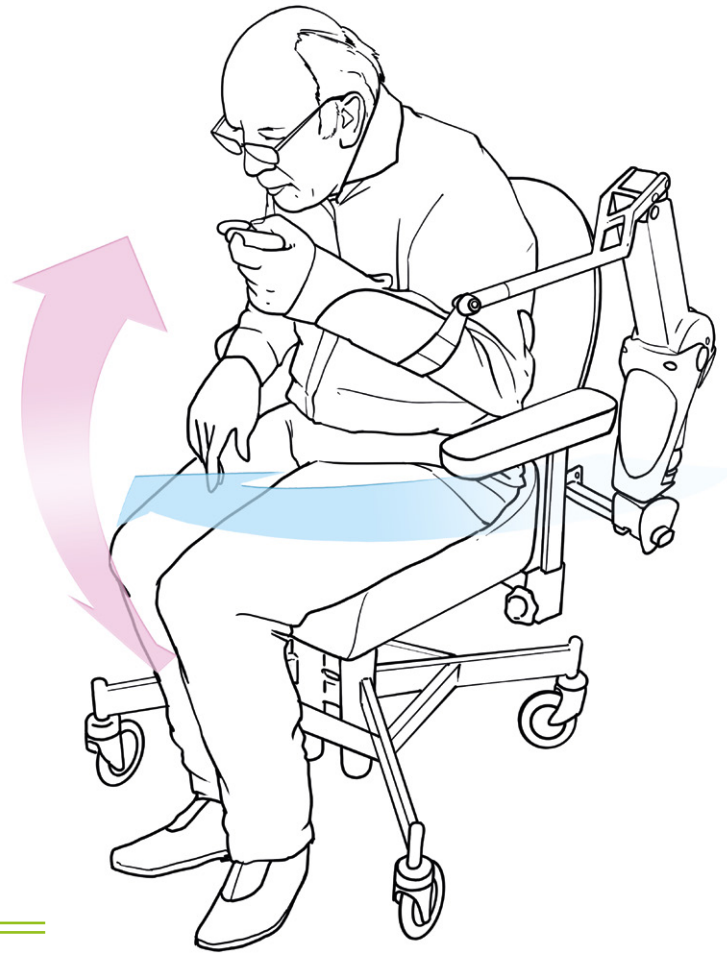

Introduction Edero

The Armon Edero is a mechanical arm support. It doesn't need to be connected to an external power source. It is easily set up and adjusted to the right weight of the users arm. The Edero is light weight and compact and therefore easy to take with you. The Edero has an extra large horizontal working range.

Armon Edero features:

- Fully mechanical
- Easily adjustable
- Light weight

ARMON PURA®

Possible to mount on

Electric wheelchair

Floor base

Work chair

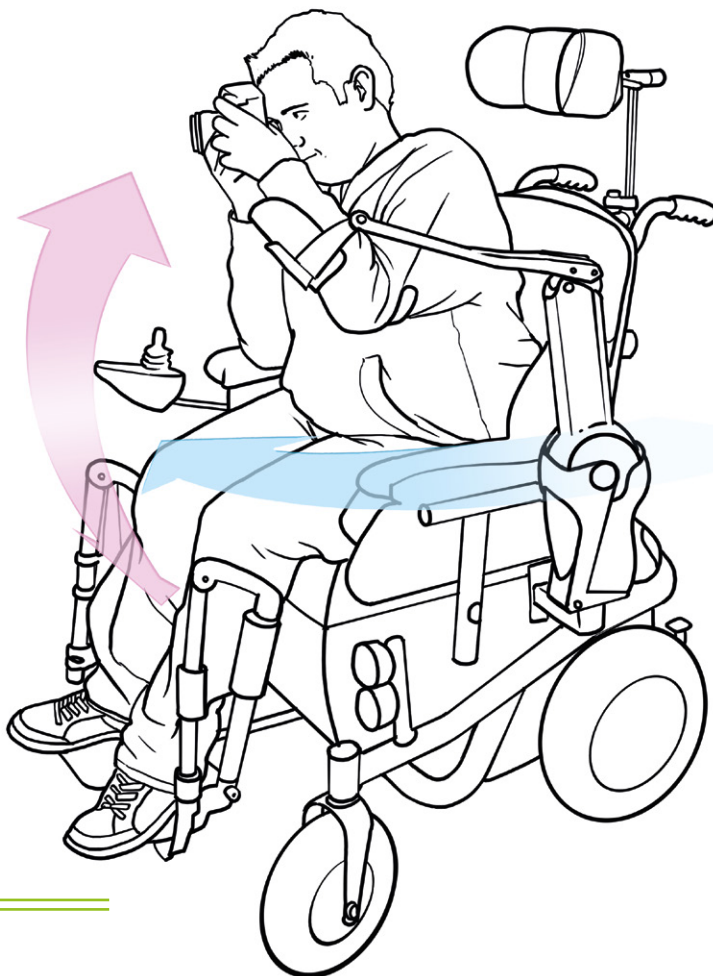

Introduction Pura

The Armon Pura is a high end arm support with a fully mechanical mechanism. It doesn't need an external power source. The Pura can be easily steplessly adjusted to the right level of support by hand. It is possible to detach the Pura in 20 seconds.

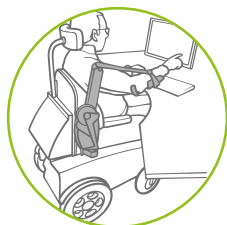

Armon Pura features:

- Fully mechanical
- Easily steplessly adjustable

ARMON ELEMENTO®

Possible to mount on

Electric wheelchair

Floor base

Work chair

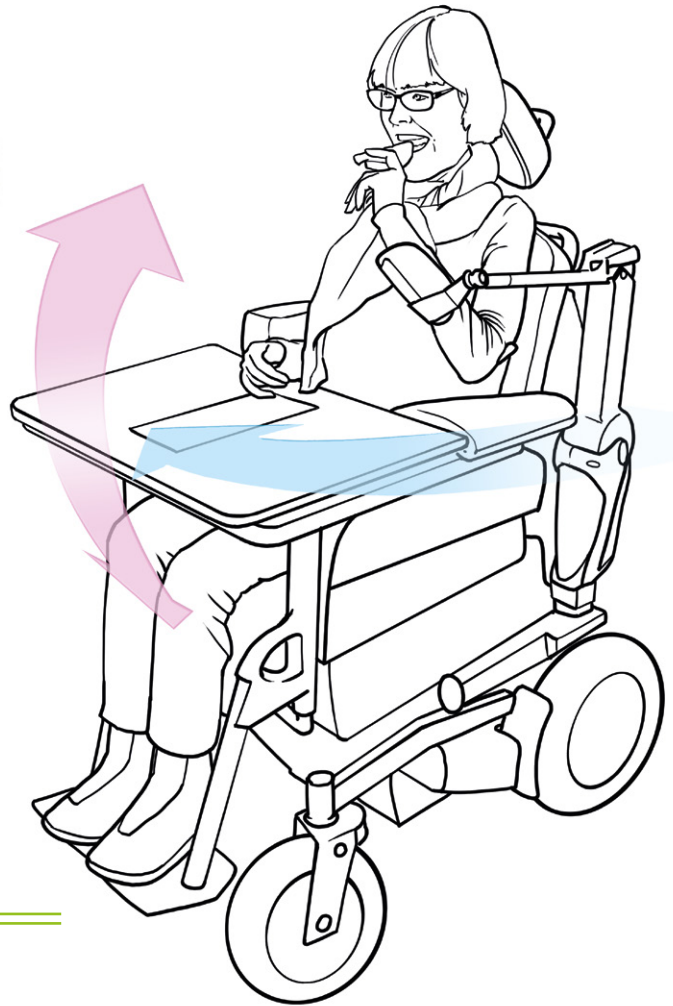

Introduction Elemento

The Armon Elemento is an electrically driven high end arm support. The Elemento makes it possible for users to adjust the level of support at any time using the controls or a touchscreen. It is easy to detach in 30 seconds when there is no need to use it.

Armon Elemento features:

- Electrical driven arm support
- Easily adjustable through controls
- Possible to control with a touchscreen or phone

ARMON AYURA®

Possible to mount on

Electric
wheelchair

Floor base

Work chair

Introduction Ayura

The Armon Ayura is the most advanced arm support we've got. Using the controls or a touchscreen you can adjust the level of support at any time. It also has two brakes with which you can lock the Ayura in every position. This can be convenient during a telephone call, or driving over a rocky road.

The Ayura also has a tilt function. This function makes it possible to tilt the Ayura forward and backward. Tilting forward will make it easier for users to stretch their arm. Tilting backwards will make it easier to bring the hand towards the user. It has a quick release system so you can detach it in 5 seconds.

Armon Ayura features:

- **Electrical driven arm support**
- **Easily adjustable through controls**
- **Tilt mechanism**
- **Brakes (possible to fixate the Ayura in every position)**
- **Possible to control with a touchscreen or phone**

About Armon Products

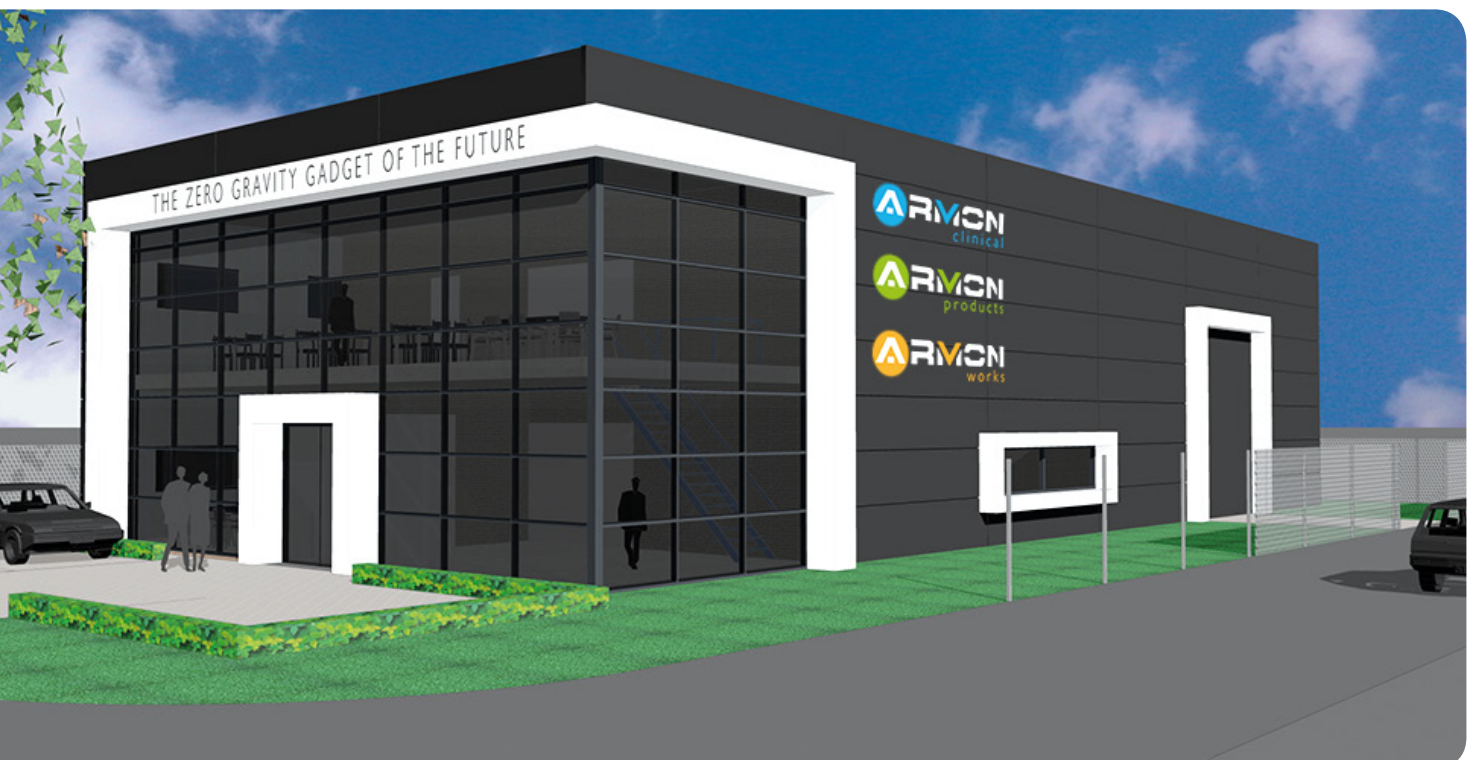

We are world market leader of dynamic arm supports.

Armon Products is a company founded in the Netherlands in 2001. We are a developer and manufacturer of high end dynamic arm supports. Our products allow people with limited arm and shoulder function, to move their arms and hands freely, and therefore make it possible to conduct all kinds of daily activities. We create independence, freedom, self-respect and quality of life.

The founder of the company has a daughter who is born with Spinal Muscular Atrophy (SMA). To help his daughter he developed for six years in collaboration with the Delft University of Technology. The outcome was a new revolutionair mechanism, which is the base for our current products.

Armon Products has his own Research and Development department. We want to make sure that assistive technology users can benefit from the best dynamic arm supports with maximum functionality and a slim design. We collaborate with institutions and universities all around the world.

We are world market leader of dynamic arm supports and export through an exclusive dealer network worldwide. We stand for: Innovation, design and durability.
